# ILLINOIS AGRICULTURAL STATISTICS

TERNATIONAL 1460

## Annual Summary

## 1985

Bulletin 85-1

# CROP REPORTING DISTRICTS

For statistical purposes the counties of Illinois are grouped into nine Crop Reporting Districts (shown on the map at right). These groupings represent divisions of approximately equal size with similar soils, growing conditions and types of farming.

Crop Reporting Districts are used in the compilation of most reports. It is not possible to collect sufficient data for each county to make county estimates on a timely basis. It is possible to summarize data at a district level and weight districts together by production percentages to arrive at the best State estimates.

Many data series in this bulletin present estimates for Crop Reporting Districts. Some series are further broken down into county estimates within districts.

State of Illinois
DEPARTMENT OF AGRICULTURE

**Office of the Director**
State Fairgrounds, P.O. Box 4906, Springfield, IL 62708-4906, 217/782-2172

Dear Friend:

The information on the following pages outlines the statistical profile of Illinois agriculture, the state's "Number One" industry. My office is repeatedly questioned regarding agriculture's scope and economic impact both here in Illinois, and in relation to other agriculturally-based states. This material provides answers and documentation for many of those questions.

The "Illinois Agricultural Statistics" summary also provides a valuable service to many other people. Members of my staff and other agricultural organizations use this summary to better define agriculture's role to members of the non-agricultural community and as a quick reference when comparing current statistics to those of past years. Members of the media also refer to this publication when seeking statistics which will better convey agricultural information to their audiences.

But perhaps the most important purpose served by the statistical summary is its role as a marketing tool for Illinois farmers. At a time when many of them are facing economic and financial difficulties, it is even more important that they effectively understand information about the many variables with which they are dealing. It is my hope that many of our State's agricultural producers will use this publication as a valuable marketing aid.

The cooperative effort of state and federal statisticians and many thousands of Illinois farm families and agribusinesses is needed to compile the facts and figures in this book. Many thanks for their continued support and assistance in this endeavor.

Sincerely,

Larry A. Werries
Director

Dear Friend:

The 1985 Illinois Agricultural Statistics Summary contains a historical account of Illinois agriculture over the last decade. Illinois' greatest industry is Agriculture, and this publication shows the magnitude and importance of Agriculture to the Illinois economy and the welfare of the farm producer. This bulletin's purpose is to provide reliable agricultural data for use in decisionmaking, and to help promote effective and orderly marketing of agricultural commodities and inputs.

Many people worked to make this bulletin possible, but the greatest contribution came from the farmers and agricultural businesses who furnished the basic information through voluntary reporting. To these folks we owe a special debt of gratitude and appreciation for we could not have done it without them.

Preparation of this bulletin required the input of every person in the office. I express my appreciation to the entire office staff for their special efforts and dedication to produce a quality product on time. A special thanks is also due the field and telephone enumerators, who are essential to the data collection process.

Those who wish to receive additional copies of this publication, or current reports issued by this office, can use the order form on the last page to subscribe.

Sincerely,

Fred S. Barrett

# ILLINOIS AGRICULTURE

The State of Illinois is blessed with some of the richest agricultural resources in the USA and in the world. Illinois farmers and industries produce abundant supplies of foods and agricultural products that have gained acceptance worldwide.

Illinois lies midway between the Continental Divide and the Atlantic Ocean and some 500 miles north of the Gulf of Mexico. The climate is typically continental with cold winters, warm summers, and frequent short period fluctuations of temperature, humidity, cloudiness and wind direction. The excellent soil and well distributed annual precipitation favor a very high standard of agricultural production.

Agriculture in Illinois has been 150,000 years in the making. During the Ice Age glaciers moved across the continent, leveling the countryside and depositing black, fertile soil over much of the state. These black soils, rich in organic content, yield an agricultural productivity that is unsurpassed. Parts of Illinois untouched by glacial movement reveal hills and valleys bedecked with timber, haystacks and grazing livestock.

Well known as the home of Abraham Lincoln, the state of Illinois has developed a highly diversified economy. America's third largest city, Chicago, lies adjacent to the Great Lakes region in northern Illinois. Beyond the urban industrial areas, there were 90,000 farms in 1985 with more than 28 million acres of fertile farmland which comprises Illinois' largest industry, agriculture.

The variation in soil types, climate and topography make it possible for Illinois farmers to grow a wide variety of crops. Processing vegetables are grown in the northeast, apples and peaches on the ridges where air movement is good, and corn, soybeans, wheat and hay in all parts of the state. Fresh market vegetables, popcorn, potatoes, horseradish and pumpkins are other crops which are grown commercially in Illinois.

Although many farms in the State have become specialized for the production of crops such as corn and soybeans, there are still 45,000 farms that have cattle; 23,000 farms have hogs; 6,800 have sheep; 5,900 have milk cows; and 6,300 have poultry. Cattle are found throughout the state but populations are most concentrated in the Northwest. Milk cow numbers are concentrated in the North and Southwest. Hogs and pigs are on farms throughout the state but the largest populations are in the Western and Northwestern areas of the state. Livestock production contributes nearly a third of the total cash receipts from Illinois farms.

Food and agricultural product processing contribute significantly to the state's economy. Illinois is one of the top ranking states in meat packing, soybean processing, dairy manufacturing, corn processing, feed milling, and vegetable processing.

Illinois' fertile soil, favorable climate, availability of good transportation and the industry of its people make it a rich agricultural empire.

# ILLINOIS' POSITION IN THE NATION'S AGRICULTURE

| Commodity group or commodity | Year | Unit | United States total or average | Illinois total or average | Illinois as percent of U.S. total | Illinois' rank among states |
|---|---|---|---|---|---|---|

# FARM INCOME

Corn and soybeans contributed 61% of the total cash receipts to Illinois farmers in 1984. Corn was the leading single commodity in 1984, accounting for 31% of the total cash receipts, down from 35% in 1983. Sales of soybeans accounted for 30% of all cash receipts, up from 28% in 1983. Cash receipts in 1984, from hogs of 16% and from cattle and calves of 10% were both virtually unchanged from the proportion of total cash receipts contributed by each of these commodities the previous year.

Illinois cash receipts from all commodities in 1984 totaled 6.74 billion dollars, down 6% from 1983. Receipts from crops represented 68% of the total Illinois cash receipts, virtually the same as 1983. Lower receipts for corn offset generally higher sale receipts for most other Illinois crops. Livestock receipts accounted for 32% of the Illinois total, unchanged from the 1983 proportion, but 1 percentage point higher than in 1982. Lower cash receipts for cattle, hogs, and dairy products more than offset small sales' increases in eggs, sheep, poultry, and some other minor livestock and product items.

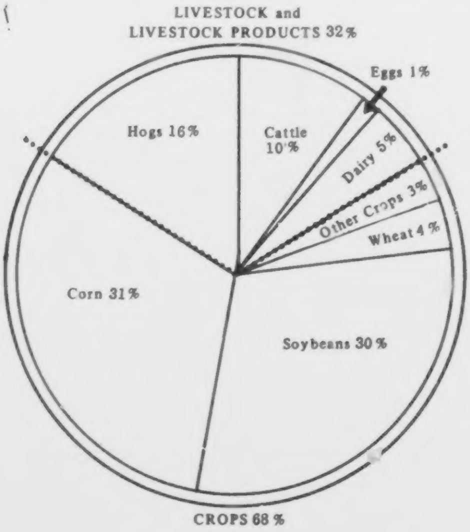
ILLINOIS CASH FARM INCOME BY COMMODITIES 1984



# REALIZED NET FARM INCOME DOUBLES IN 1983

Realized net farm income in 1983 (the amount left after deducting farm production expenses from realized gross farm income of farmers) was 2,474.0 million dollars, double 1982's realized net farm income and almost triple 1981's. Increases in cash receipts and government payments caused realized gross income to increase by 6% while farm production expenses declining 9% caused the increase in realized net farm income.

Total net farm income declined from 934.8 to -584.5 million dollars in 1983. The total net income per farm was $-5,845, compared to $8,989 in 1982 and $17,676 in 1981.

1/ REVISED.

# EXPORTS

In fiscal year 1984, Illinois was the second leading State in exports of agriculture products, with a total value of 3,279.3 million dollars, up 11% from 1983 and virtually the same as for fiscal 1982. Illinois exports in 1984 represented 8.6% of the total U.S. exports of agricultural commodities. The five leading agricultural exporting States for fiscal 1984 were Iowa, Illinois, California, Nebraska, and Texas.

Compared to fiscal year 1983, exports in 1984 for feed grains and products increased 24%, soybeans and products decreased 2%, wheat and products increased 9%, live animals and meat decreased 21%, hides and skins increased 38%, and fats, oils and greases increased 17%.

In FY 1984, Illinois was the leading State in exports of feed grains and products, and the second leading State in exports of soybeans and its products. Exports of feed grains totaled 1,750.9 million dollars and soybean exports amounted to 1,232.2 million dollars, and when combined accounted for 91% of the total Illinois agricultural exports. Of the total U.S. feed grains and soybeans exported, Illinois accounted for 19.3% and 16.3%, respectively in FY 1984.

Illinois, in 1984, ranked 8th in the exports of live animals and meat with a total of 42.9 million dollars. Exports of hides and skins total 36.0 million dollars, placing Illinois 9th in the Nation. Wheat, at 116 million dollars, along with a few more minor crops, and other livestock products account for most of the remaining Illinois Agricultural products exported in FY 84.

U.S. agricultural exports during FY 1984 totaled $38 billion compared with $34.8 billion the previous year. Values increased for wheat, rice, coarse grains, cotton, fruits and vegetables, hides, tallow, and dairy products.

Iowa moved ahead of Illinois as the leading agricultural export State in FY 1984, largely due to the 1983 drought, which severely reduced soybean yields in 25 of the 29 producing States. Agricultural export contributions of most States increased during 1984. Other top 10 exporters were California, Nebraska, Texas, Kansas, Minnesota, Indiana, North Dakota, and Ohio.

**ILLINOIS AND UNITED STATES TOTAL EXPORTS, BY SELECTED COMMODITIES**

| Commodities | | Fiscal Year Ending September 30 | | | |
|---|---|---|---|---|---|
| | 1980 | 1981 | 1982 | 1983 | 1984 |
| | | Million Dollars | | | |
| Feed Grains & Products | 1,862.9 | 2,150.9 | 1,482.4 | 1,416.7 | 1,750.9 |
| Soybeans & Products | 1,437.9 | 1,390.6 | 1,481.6 | 1,257.6 | 1,232.2 |

| UNITED STATES | 40,481.4 | 43,780.1 | 39,094.5 | 34,769.5 | 38,026.6 |

SOURCE: USDA, ERS (FATUS)

EXPORT DETERMINATION: USDA's Economic Research Service (ERS) publishes estimates of U.S. agricultural export contributions by State on a fiscal-year basis. These estimates are prepared by a major commodity group, based on the assumption that, for each commodity, a State contributes the same share as its share of production or marketings. For example, if Florida provides 90 percent of all oranges used for processing in the United States, it contributes approximately 90 percent of all orange juice exports. However, where obvious distortions exist, this procedure is amended accordingly.

**EXPORT SHARES FY84** (Oct. 83 - Sept. 84)

| Commodity | U. S. total | Illinois share | Percent of U.S. total | Illinois' rank among States |
|---|---|---|---|---|
| | Million dollars | | | |
| All commodities | 38,027 | 3,279 | 8.6 | 2 |
| Feed grains and products | 9,075 | 1,751 | 19.3 | 1 |
| Soybeans and products | 7,550 | 1,232 | 16.3 | 2 |

# ILLINOIS CLIMATE

Prepared by the Illinois State Water Survey, Champaign

Illinois lies midway between the Continental Divide and the Atlantic Ocean and some 500 miles north of the Gulf of Mexico. The climate is typically continental with cold winters, warm summers, and frequent short period fluctuations of temperature, humidity, precipitation, cloudiness and wind direction, primarily in winter. Most of the precipitation falls during the warmer months. The excellent soil and well distributed annual precipitation of 32 to 48 inches favor a very high standard of agricultural production.

Illinois' climate primarily is the result of being dominated by the air from the Pacific Ocean from fall through winter to spring with incursions of cold, dry arctic air from Canada in winter, and warm, humid air from the Gulf of Mexico in summer.

Since the Gulf is our source of warm air and moisture for precipitation, Northern Illinois, being further from the source is cooler in the mean, has shorter warm episodes, and experiences less precipitation than the South. Northern Illinois is much more susceptible to colder temperatures and longer duration outbreaks from Canada.

Precipitation during fall and winter tends to be distributed uniformly over large areas caused by large storms moving across the continent. In contrast, spring and summer precipitation occurs principally as brief showers or thunderstorms, affecting relatively small areas. This erratic occurrence of warm season precipitation generally results in an uneven spatial distribution.

Sunshine averages more than 70% of the possible total during the three summer months.

Illinois extends nearly 400 miles from north to south, and the January temperature difference between Rockford (north) and Cairo (south) is approximately 12°F in the mean. Temperatures reach zero or below on an average of seven days annually in the extreme North and only one day or less in the far South. The lowest temperature of record for the State is -35°F at Mt. Carroll on January 22, 1930.

The north-south mean temperature range in July is only about 6°F since sun angle is more equitable over the State and high relative humidities tend to moderate temperatures. Temperatures reach 90°F or higher on an average of near 20 days annually in the North and about 50 days in the South and West-Central. The highest temperature of record for the State was 117°F at East St. Louis on July 14, 1954.

The annual average snowfall ranges from near 30 inches in the extreme North to only 10 inches in the extreme South. The most likely form of winter precipitation in the North is snow, whereas more than 90% of Cairo's winter precipitation falls as rain. Snowfall of 1 inch or more occurs on an average of 10 to 12 days per year in the extreme North and only 3 or 4 in the far South. Snow cover of an inch or more averages about 50 days annually in the North and only about 15 days in the South, exhibiting large year-to-year variation. Because of its latitude, Central Illinois experiences more freezing precipitation than either Northern or Southern Illinois. This form of precipitation falls as a liquid and freezes on contact, resulting in a treacherous glaze on roads and heavy accumulations on trees and wires. Damage from such storms can be severe. Central Illinois experiences about five days per year with glaze, decreasing to 1 to 2 days per year in the North and South.

Thunderstorms average about 35 to 50 annually in Illinois, and most cause little or no damage. On occasion they are accompanied by hail, damaging winds, and tornadoes. Hail falls on an average of two or three days annually in any one locality, but only about once every two years during periods when crops are most susceptible to damage. Most hailstorms are too short in tenure or the stones too small in size to cause major crop damage. About 25 tornadoes occur each year somewhere in Illinois, mostly in spring.

The mean frost-free period ranges from less than 150 days in the extreme North to more than 210 days in the extreme South. The mean date of the last spring freeze ranges from April 1 in the extreme South, to May 5 in the extreme North. The mean date of the first fall freeze ranges from about October 1 in the extreme Northwest to October 30 in the extreme South. Earliest and latest-ever frost dates are about 30 days before and after the mean date. Dates given on the next page are the average for the district. Locations within the district having similar exposure usually agree within plus or minus five days. Crop damaging freezes are most often associated with radiation freezes. Under such conditions (clear skies and light winds), the temperature may vary 10°F or more at adjacent ridge and valley locations. The tables on the next page are based on temperatures in a standard Weather Service thermometer shelter at an approximate height of five feet above ground. Under strong radiational conditions the temperature will be lower at ground level.

"Prepared by the Illinois State Water Survey, Champaign"

# WEATHER IN 1984

Mean temperature in Illinois during 1984 was very close to the long term normal at virtually all sites. Anomalies were limited to less than 2°F difference from normal. Precipitation was widely variable over the State; generally, near normal conditions prevailed across North and East-Central Illinois. West-Central Illinois received 5 to 7 inches more than normal, and the southern part of the State was about 10 inches greater than normal.

## Precipitation

Although annual precipitation was near normal, it varied considerably from month to month. We entered 1984 with substantial snow cover. January precipitation was much below normal. February was near normal, but March through May were wetter than normal, which contributed to delayed planting in some parts of the State. June, July and August were below normal, but September was above normal, particularly in the southern half of the State. The last three months of the year were very wet, saturating the soil prior to the formation of ground frost. This heavy accumulation of precipitation resulted in much delayed harvest, in some cases, delayed well into winter. Ground frost was relatively insignificant during 1984. The greatest depth measured during the year was about 20 inches in January, compared to the normal for that time—30 inches.

Southern Illinois received substantial snow on February 28-29 (3 to 15 inches with 45 mph winds), and a 6 to 12-inch snow cover. Three major snowstorms in March contributed another 8 to 12 inches to Central Illinois, 6 to 8 inches in the North and 3 to 8 inches in the South.

## Temperatures

Four of the first six months of 1984 were below or much below normal temperatures. July mean temperature was lower than that of June! Only February, June, October and December were warmer than normal. The first fall frost was about two weeks later than normal. However, much cooler than normal temperatures prevailed over Illinois until near the end of May, when summer suddenly arrived. July and August, though warm, were punctuated occasionally by cold incursions of welcome Canadian air.

## Noteworthy Events of 1984

There was considerable ice buildup along the Mississippi and Illinois Rivers in January due to below normal temperatures, and resulted in some flooding at Havana on the Illinois. River stages continued above normal in February as did soil moisture. Small rivers and streams in Central and Southern Illinois experienced flooding in April, and the continued high soil moisture delayed field preparation and planting. Precipitation in June in the Bloomington, Paris, Mattoon, Effingham and Lawrenceville area was less than one inch during June, the driest June of record. On balance, summer was dry over most of the State. The greater than normal precipitation, beginning in October, continued through the end of the year. In October, McLeansboro, Anna and Geneseo each received more than seven inches of precipitation. Total precipitation for September through November was generally 50% greater than normal (except for Northwestern Illinois), being the fourth wettest of the Century.

The year of 1984 was the fourth consecutive year with above normal precipitation over most of the State. Such a 4-year run of above normal precipitation occurred only once in the past 120 years.

## Severe Weather

Tornado frequency was slightly greater this year (34) than the 25-year mean (26). Over half of the total were recorded in April, with 11 tornadoes reported on the 12th alone, resulting in one death and nine injuries in Illinois. The most severe of that month occurred on the 27th near and in Plainfield (Will County). One person was killed, there were five injuries, and 43 houses were damaged. The path length was 8.7 miles and the width was 200 yards. One especially noteworthy storm of 1984 (because of the lateness in the season) occurred on November 9. This storm's path was 30 miles long (from Dudleyville, Bond County to Brownstown, Fayette County) and 150 yards wide. Eleven people were injured in Fayette County and 169 houses in Brownstown were damaged.

# CROPS

Production of crops in Illinois in 1984 rebounded to more normal levels after 1983's total production was reduced due to drought and the Payment-In-Kind program. Corn production climbed almost 100% above 1983, to 1.2 billion bushels. The corn harvested acreage rose approximately 3 million acres from 1983 to 10.9 million acres, with an average yield of 114 bushels per acre. Soybean production in 1984 totaled approximately 289 million bushels, up 8% from 1983. Harvested acreage declined slightly from 1983 to 9.0 million acres, with a Statewide average yield of 32 bushels per acre, compared to 1983's 29.5.

Illinois farmers marketed 4,556 million dollars worth of crops in 1984. Corn marketings made up 2,057 million dollars, or 30.5%, while soybeans accounted for 2,034 million dollars, or 30.2% of the total cash receipts from farm marketings. In 1984, receipts from crops represented 67.6% of the total cash receipts received by Illinois farmers from all farm marketings. Illinois ranked second in the Nation in cash receipts from crops in 1984, behind California.

Illinois continues to be a major food supplier to much of the world. In 1984, Illinois was the leading State in the U.S. in exports of corn, soybeans, and their products. Exports of feed grains and their products (primarily corn) totaled 1,751 million dollars in fiscal year 1984, while soybeans and soybean products amounted to 1,232 million dollars. These two categories accounted for 91% of the total value of all crop and livestock exports from Illinois in 1984.

# FIELD CROPS

Illinois in 1984, saw the production of field crops rebound to a more normal level, following the sharp reductions in crop production in 1983 as the result of a severe drought and the Government Acreage Reduction Programs. While the 1984 overall crop production index increased 47% from the previous year, it was still 16% below the record high crop production level of 1982. Field crops showing a larger production in 1984 from 1983 were corn, soybeans, wheat, and sorghum, while the production of oats and rye were lower.

Farmers in Illinois harvested 23,496,000 acres of crops in 1984, up 17% from the 20,090,000 acres harvested in 1983, but 1% less than the 23,848,000 acres harvested in 1982. The low acreage level in 1983 was primarily due to the heavy participation in the Government Acreage Reserve and PIK programs.

The table below shows the "All Crop Production Index" with the base period, 1977=100.

CROP PRODUCTION INDEX, 1960 - 84

| Year | 1977=100 | Year | 1977=100 | Year | 1977=100 |

# CROP DEVELOPMENT 1984

The year of 1984 saw improved crop growing conditions over 1983. Although average annual temperatures were near normal across the State, cooler temperatures during the growing season offset below normal precipitation and led to much improved yields.

The first months of 1984 were ones of contrast with January and March temperatures below normal while February was much above normal. Precipitation was below normal in January and then above normal in February and March. The cool and wet weather that started in March continued through May, delaying planting of crops across most of the State. Temperatures warmed in June and were above normal while precipitation was below normal for the month. Below normal precipitation continued through July and August but with below normal temperatures. The cooler than normal temperatures continued into September, but precipitation was above normal in Southern Illinois and below normal over the rest of the State. October and November were warmer than normal but also saw above normal precipitation across the State, delaying harvesting of crops and winter wheat seeding. December continued the trend of warmer than normal temperatures and frequent rains. Because of this, completion of harvest in some areas of Southern Illinois was delayed until the ground was frozen in early 1985.

Planting of the 1984 winter wheat crop began in mid-September 1983, about the usual starting time, and made good progress through the fall. Virtually all of the 1,800,000 acres planted was seeded by mid-November. Mild temperatures and adequate supplies of soil moisture in October aided emergence of the crop. However, heavy rains in November caused some flooding of low-lying fields. An adequate snow cover protected the crop from the extremely cold temperatures that occurred in late December and January. Cool and wet conditions in the spring slowed growth of the crop; however, warmer and drier conditions in June aided crop maturation and allowed harvest to begin by the end of the month. The dry conditions in July allowed harvesting of the crop to make rapid progress and be virtually complete by the middle of the month. Acres harvested totaled 1,600,000 or about 89% of the planted acreage. Yield, at 44 bushels per acre, was 2 bushels lower than 1983's yield and 1 bushel below 1982's yield. Production totaled 70,400,000 bushels.

Planting of the corn crop was slowed by the wet, cool spring. Planting progress lagged behind the average from the time planting started in late April to completion in mid-June. Acreage planted totaled 11,200,000 acres, up sharply from 1983 when the PIK program reduced acreage. The crop made good progress through June and July, although development ran slightly behind the 5-year averages. Lack of rainfall began to be a problem for many areas of the State by the end of July, particularly in the South. Inadequate, spotty rainfall continued throughout August, causing the Statewide crop condition to decline. Corn harvest began on schedule in mid-September and made good progress into early October. However, wet weather during October saturated fields and severely hampered harvest progress. Harvest was nearly complete for the northern two-thirds of the State by mid-November, but progress in the southern counties was delayed by wet fields. Many areas of the South had to wait for a hard freeze before completing harvest. Farmers harvested 10,940,000 acres of corn for grain, with an average yield of 114 bushels. Total production for the State was 1,247,160,000 bushels.

Soybean planting was also delayed by wet field conditions during the spring. Planting started in mid-May and ran behind the average until completion in late June. Farmers planted 9,200,000 acres of soybeans, up 1% or 100,000 acres from 1983. The crop made good progress through July and August although dry weather put it under stress in many areas, particularly in the South, by late July. Spotty rainfall in August resulted in extremely variable crop conditions with the late planted double crop soybeans most affected. Harvest began in mid-September and made good progress until early October when rain slowed it. Wet fields and high grain moisture continued to delay harvest through October and November. Harvest wasn't complete until late November in northern areas of the State while some areas in the South had to wait on a hard freeze before completing harvest. Acres harvested totaled 9,020,000 with a larger than usual abandonment due to adverse harvest conditions. The average yield was 32 bushels per acre and total production was 288,640,000 bushels.

As with corn and soybeans, oat seeding was slowed by the poor conditions during April and was not complete until mid-May. This was about a week behind the average. Farmers seeded 375,000 acres, down 82% from 1983 when oats were seeded as a cover crop on conservation use acres as a result of farmer sign-up in the PIK program. Because of the late planting, crop development ran behind normal through the growing season although the crop had adequate supplies of moisture. Harvest began in mid-July and, aided by favorable weather conditions, was complete by mid-August. Farmers harvested 165,000 acres for grain with a statewide yield of 65 bushels per acre. Production totaled 10,725,000 bushels, the lowest since records began in 1866.

Planting of winter wheat for the 1985 crop began on schedule in mid-September but was delayed by rain beginning in mid-October. Wet fields continued to hamper seeding through November and much of the acreage was seeded late and under muddy conditions. Mild temperatures aided emergence of the crop but excess moisture caused ponding in low-lying fields. Farmers only seeded 850,000 acres in the fall of 1984, the smallest since records began in 1866.

Plowing of the 1985 intended corn and soybean acreage was also hampered by the wet conditions with only 53% tilled by mid-December. This was well behind the average.

**ILLINOIS' POSITION IN NATION'S CROP PRODUCTION**

| Crops | Date | U.S. total | Illinois total | Percent of U.S. total | Illinois' rank among States |
|---|---|---|---|---|---|
| | | - 1,000 bushels - | | Percent | |
| Soybeans | 1984 | 1,860,783 | 288,640 | 15.5 | 1 |
| Corn | 1984 | 7,649,995 | 1,247,160 | 16.3 | 2 |
| Oats | 1984 | 471,921 | 10,725 | 2.3 | 10 |
| Wheat | 1984 | 2,595,479 | 70,400 | 2.7 | 13 |

# FRUIT

## 1984 APPLE PRODUCTION

Illinois commercial apple production totaled 90.0 million pounds (2,143,000 bushels, 42-pound equivalents) in 1984. Production was about on par with the previous year, and 2.0 million pounds above 1982. The total value of the 1984 crop is estimated at $13,637,000, up 14% from 1983's $11,936,000. The 1984 average price per pound is 15.2 cents, compared to 13.3 cents in 1983 and 1982.

The apple crop varied widely across the State in 1984 due to extremely variable weather conditions. The drought conditions in the summer of 1983, the extremely cold December 1983, and the late, wet spring of 1984 led to poor bloom and light set in many areas. The dry 1984 summer further cut production potential in some orchards. Harvest conditions were generally good until late in the season, when wet and humid weather caused some delays.

**APPLES: Production, price and value, Illinois, 1975-84**

| Year | Production: Total | Production: Utilized | Price per pound | Value of utilized production |
|---|---|---|---|---|
| | - Million pounds - | | Cents | 1,000 dollars |
| 1975 | 115.0 | 112.0 | 7.6 | 8,512 |
| 1976 | 86.0 | 86.0 | 10.2 | 8,772 |

## 1984 PEACH PRODUCTION

Peach production in Illinois totaled 16.0 million pounds (333,000 bushels, 48-pound equivalents), compared to production of 13.0 million in 1983, and no production in 1982 because of damage from extremely low winter temperatures. The value of the 1984 crop totaled $3,577,000, up 2% from 1983's total value of $3,493,000. The average price per pound in 1984 was 22.4 cents, down from 1983's 26.9 cents per pound.

Tree damage and loss from the extreme winter of 1982, and the cold temperatures of December 1983 continued to become apparent during the 1984 growing season. The cool, wet spring and dry summer of 1984 cut production potential in some areas, and there were some reports of reduced peach size in 1984. Harvest weather was generally good.

## 1984 SWEET CORN FOR FRESH MARKET

Production of sweet corn for the fresh market in Illinois totaled 331,000 hundredweight, up 5% from 1983 and up 9% from 1982. Acreage harvested totaled 3,800 acres, up 3% or 100 acres from 1983 and the same as 1982. The yield was 87 cwt. per acre, up 2 cwt. from 1983. Total value of the crop declined 11% to $3,118,000 as the price dropped to $9.42 per cwt. from 1983's $11.10.

## 1984 SWEET CORN FOR PROCESSING

Production of sweet corn for processing in Illinois totaled 194,180 tons in 1984, up 34% from 1983 and up 4% from 1982. Harvested acreages, at 36,500 acres, increased 6% or 2,000 acres from 1983 while 1984's yield of 5.32 tons per acre increased from 4.19 tons per acre in 1983. Total value of the 1984 crop was $13,573,000, up 42% from 1983 as the average value per ton increased 5% to $69.90 per ton.

## 1984 ASPARAGUS FOR FRESH MARKET AND PROCESSING

Production of asparagus for both the fresh and processing markets totaled 14,000 hundredweight, down 48% from the 27,000 cwt. produced in 1981 when the crop was last estimated. Harvested acreage, at 1,400 acres, is down 48% or 1,300 acres while the yield of 10 cwt. per acre was the same as in 1981. The total value of the crop was 1,053,000 dollars while the average value per ton received by growers was $75.20 per cwt.

**ASPARAGUS FOR FRESH MARKET AND PROCESSING: Acreage, yield, production, and value, Illinois, 1984**

| | Acres | Cwt. | 1,000 cwt. | Dollars | 1,000 dollars | Dollars |
| 1984 | 1,400 | 10 | 14 | 75.20 | 1,053 | 752.14 |

# LIVESTOCK, DAIRY AND POULTRY

Illinois' cattle, hog, and sheep producers received $1.77 billion from marketings in 1984, 5% below the $1.87 billion received in 1983. Cattle, hog, and sheep cash receipts in 1984 from marketings and sale of farm slaughter were $685.5 million, $1.08 billion, and $7.72 million, respectively. This compares with 1983 receipts of $744.6 million for cattle, $1.12 billion for hogs, and $6.02 million for sheep. Consequently, cash receipts for cattle decreased in 1984 by 8%, and hogs down 4%, while sheep receipts increased by 28%.

Cash receipts for Illinois egg producers were $50.4 million in 1984, a 1% increase from the $49.8 million produced in 1983.

Illinois ranks 12th in the U.S. in total cash receipts from milk, receiving $347.1 million in 1984 or 4% less than the $361.1 million received in 1983.

All livestock and livestock products in Illinois generated total cash receipts of $2.2 billion in 1984, down 5% from the $2.3 billion cash receipts in 1983.

# CATTLE

Although small herds of cattle are scattered throughout Illinois most land is utilized for the production of grain. The largest concentration of cattle is in the northern portion of the State where rolling pastureland is more suitable for cattle production. Convenient processing plants, vast supplies of feed, and large consumer markets provide the cattleman of this area appropriate conditions to carry on production.

During 1984 there were 45,000 cattle operations in Illinois of which 5,900 or 13% were milk cow operations and 10,500 or 23% were cattle on feed operations.

Milk cows present on dairy operations in Illinois averaged 224,000 during 1984, or an average size operation of 39 head. The leading state in the dairy industry (Wisconsin) had 1,828,000 head of dairy cows on 43,000 operations throughout the State, or an average size operation of 43 head.

Cattle on feed marketed in Illinois totaled 850,000 head, with an average size feeder operation marketing 81 head. By comparison, the leading state in cattle marketings, Texas had 1,000 cattle feeder operations and boasted an average per operation of 5,090 head.

Cattle numbers for Illinois and the entire U.S. experienced continued declines in 1984. The number of cattle and calves on U.S. farms on January 1, 1985 totaled 110 million head, 3% below the 114 million in 1984. In Illinois all cattle inventory decreased by 4%, from 2.6 million head at the beginning of 1984 to 2.5 million January 1, 1985. The cattle inventoried in Illinois on the first day of the year were valued at $1.04 billion, the same level as the previous year.

The counties leading in the number of all cattle on farms on January 1, 1985 were Stephenson and Jo Daviess, both with 92,900; Ogle, 79,300; Carroll, 72,200; and Henry, 71,000.

The number of beef cows on Illinois farms January 1, 1985 totaled 615,000, a drop of 10% from the year earlier level of 682,000. The top five counties in beef cow numbers were Jo Daviess, 20,600; Fulton, 19,300; Pike, 19,200; Adams, 18,600; and Knox, 17,300.

The number of milk cows on January 1, 1985 was 1% below the year ago level, 225,000 head compared to 228,000 on January 1, 1984. The five leading counties in milk cow numbers on January 1, 1985, were Stephenson, 35,200; Jo Daviess, 21,300; Clinton, 18,300; McHenry, 15,300; and Washington, 9,600. The 1984 calf crop was down 9% from the 1983 level to 730,000 head from 800,000.

The number of cattle and calves on feed January 1, 1985 for the slaughter market was 540,000 head. This was a 6% increase from the January 1, 1984 level of 510,000 head. The cattle on feed inventory consisted of 294,000 steers and steer calves and 246,000 heifers and heifer calves, up 11% and 1% respectively from a year ago.

The number of cattle and calves marketed during 1984 totaled 1,283,000 head. This was a decrease of 12% from the 1983 level of 1,462,000 head marketed. The number of cattle and calves on feed marketed during 1984 totaled 850,000 head, a decrease of 11% from the 1983 level of 955,000 head marketed.

# HOGS AND PIGS

Approximately 15% of all cash receipts to farmers in Illinois are derived from the sale of pork. In 1984, cash receipts amounted to $1.080 billion or 16.0% of all cash receipts, compared to $1.124 billion and 15.7% in 1983.

Pork production is centered primarily in the northwestern counties of the State---from Henry on the north to Pike county on the south. The leading counties in hog production are Henry, 288,200; Pike, 206,800; Adams, 185,500; Knox, 169,200 and Bureau, 131,500. The number of hog farms in Illinois has steadily declined in the past 5 years. In 1980, there was an estimated 30,000 hog farms in the State, compared to 23,000 in 1984--a decline of 7,000 farms.

The number of hogs and pigs on farms in Illinois is estimated quarterly. The first quarter is historically the lowest of the year; this holds true for 1984, as the March 1 estimate was 5,000,000 head. The third quarter normally has the highest inventory for the year; this was also true in 1984, as our inventory peaked on the September 1 quarter at 6,100,000 head. The second and fourth quarters are yet to establish a predictable trend.

Illinois hog producers had 5.40 million hogs and pigs on hand December 1, 1984, unchanged from the previous year's level. The inventory consisted of 680,000 breeding stock and 4,720,000 market hogs and pigs.

The average value per head for hogs and pigs on hand December 1, 1984 was $77.00, an increase of $19.00 from the previous year's value of $58.00. This increase in value accounted for the increase in total value to $415,800,000; as the inventory level is unchanged from December 1, 1983.

Farrowings for the period December 1983 through November 1984 totaled 1,325,000; up slightly from a year earlier. The average number of pigs saved per litter over the same period was 7.21, compared to 7.30 the previous period.

The December 1983 through November 1984 pig crop was 9,558,000, down 1% from a year earlier. Hog and pig marketings in 1984 totaled 9,374,000 head, down 3% from the 1983 level of 9,691,000.

# SHEEP AND WOOL

The number of sheep and lambs on Illinois farms January 1, 1985 totaled 136,000, down 6% from the previous year level of 145,000.

An estimated 117,000 lambs were born during 1984, compared with 128,000 during 1983, for a decline of 9%.

The value per head for stock sheep increased $8.00, to $65.50 on January 1, 1985. The total value of all sheep and lambs increased 7% from January 1, 1984 to January 1, 1985 to $8,908,000.

The estimated 166,000 sheep shorn in Illinois during 1984 produced an average weight per fleece of 6.6 pounds for a production total of 1,093,000 pounds of wool. This is in comparison with the 181,000 head shorn in 1983 with an average weight per fleece of 6.7 pounds for a total of 1,214,000 pounds of wool. The average price per pound for wool was up 18 cents during 1984, from 40 cents in 1983 to 58 cents in 1984. The value of wool production increased 30%, from the $486,000 in 1983 to $634,000 in 1984.

An estimated 144,000 head of sheep and lambs were marketed in 1984, up 1% from the 143,000 marketed in 1983.

# POULTRY AND EGGS

The total number of chickens on hand (excluding broilers) in Illinois December 1, 1984 was 4.20 million, a 14% decrease from the 4.91 million inventory on December 1, 1983. The total value of the chicken inventory decreased 22% from December 1, 1983 to December 1, 1984 to $6.30 million.

The average number of layers on all Illinois farms during 1984 was 3.65 million, a decline of 12% from the 4.14 million in 1983.

Egg production during 1984 totaled 876 million eggs, down 13% from the 1983 total of 1.00 billion eggs. The laying rate during 1984 averaged 240 eggs per layer, slightly lower than the previous year.

There were 290,000 turkeys produced in Illinois in 1984. The 1984 turkey production increased 39% from the 208,000 reported in 1983.

# MINK

Mink production in Illinois is located primarily in the northeastern corner of the state near Chicago. The heaviest concentration of mink operations is in McHenry, Lake, and Kane counties. Only a few operations are located out of this main area.

Illinois ranks sixth nationally in mink pelt production and comprised 5% of the Nation's total mink supply during 1984. By producing 205.4 thousand mink pelts Illinois mink producers increased production in 1984 by 1%. During 1985 the females bred to produce kits in 1985 totaled 45.2 thousand, down 8% from the 49.3 thousand females bred to produce kits in 1984.

Several mink color classes are produced in Illinois, with "Standard" the most prevalent. During years where the data lends itself available without disclosing individual operations, the "Demi-buff" color class was second in popularity with "Pastel" third and "Pearl" fourth. The remaining balance of mink furs produced in Illinois fall in the "Sapphire," "Gunmetal," "Violet Type," and "Other" categories.

# MILK AND DAIRY PRODUCTS

Total milk production in Illinois during 1984 totaled 2.629 billion pounds, a decrease of 77 million pounds (3%) from 1983. This production marks the first year-to-year decline since 1979. Milk produced per cow during 1984 was 11,737 pounds, 131 pounds below the previous year's record 11,868 pounds.

The annual average number of milk cows on Illinois farms decreased by 4,000 head (2%) during 1984 to 224,000. Milk cow replacement heifers on January 1, 1985 totaled 115,000 head, 10,000 more than a year earlier. This makes the ratio of replacement heifers to milk cows 51.11 heifers per 100 dairy cows.

Milk production is concentrated primarily in the extreme northern counties of the State--from Jo Daviess on the northwest to Kane county on the northeast, with another concentration of producers just east of the St. Louis metro area. The counties leading in milk cow numbers in 1984 were: Stephenson, 35,200; Jo Daviess, 21,300; Clinton, 18,300; McHenry, 15,300 and Washington, 9,600.

Milk production in Illinois peaked in the decade of the 1940's, with production at 5.44 billion pounds. Production has shown an overall decline in the past 40 years. In the decade of the 1950's production dipped to 4.87 billion pounds; the 1960's dropped even more to 3.63 billion; and the 1970's production slipped to 2.39 billion pounds, then turned around to increase through 1983. While production has declined so has milk cow inventory numbers; in 1954 Illinois milk cow inventory was estimated at 824,000 head. Illinois milk cow inventory declined every year from 1954-1979, with 1979's inventory estimated at 231,000 head. While milk cow inventory and production has steadily declined, milk per cow has steadily increased. Milk per cow for 1950 was estimated at 5,630 pounds. Since 1950 milk per cow has been up 28 out of the last 34 years.

The total number of farm operations with milk cows declined by 200 to 5,900, in 1984. Milk cow farms accounted for 6.1 percent of all farms in 1984, compared with 6.1 percent in 1983.

Milk and dairy products accounted for $347.1 million (5.2%) of the total cash receipts to farmers and ranchers in Illinois for 1984; this compares with $361.1 million (5.1%) for 1983.

During 1984, ice cream production declined by 10%, all cheese by 3%, creamed cottage cheese by 1%, while ice milk production was up 6%.

# LIVESTOCK SLAUGHTER

Illinois slaughter plants produced 2.08 billion pounds of red meat in 1984, a 4% decline from the 2.16 billion pounds produced in 1983. This ranks Illinois 5th in 1984 among red meat producers in the U.S. and comprises 5% of the Nation's production of red meat.

Beef production in 1984 totaled 1.26 billion pounds or a 5% increase from the 1.20 billion pounds produced in 1983. There were 1.19 million head of cattle slaughtered in Illinois in 1984, an increase of 3% from the 1.16 million slaughtered in 1983. The average liveweight of cattle slaughtered in Illinois increased from 1,037 pounds in 1983 to 1,053 pounds in 1984.

# 1984 CROP AND LIVESTOCK INDEXES

The Illinois Prices Received Index has been computed from 1956 to the present using new quantity weights each year. The Illinois Index utilizes weights based on the average value and quantity of each commodity sold during a previous 5-year period.

The all farm products index of prices received by farmers in 1984 was 114% of it's base period, 1978 through 1982. This was on par with 1983's all farm products index, and 5% above 1982's index. Bolstered by moderately high prices for the 1983 drought-stricken crops, the all farm products price index began 1984 at 121. The index fluctuated during the first half of 1984, until reaching a high of 124 in June. Primarily in response to lower crop prices, the index dropped to 117 in July, and continued to decline, until reaching a low of 100 in December.

The index of prices received for all crops, at 116% of it's base period, was one point higher than the previous year, and 15 points, or 15% above 1982. Primarily due to higher prices for the previous year's crop, the index began the year at 124, and climbed to a high of 130 in May and June. Beginning in July, however, falling crop prices caused the index to decline from a high of 130 in June, to a low of 96 by December.

The index of prices received for all livestock and livestock products averaged 109% of its base period during 1984. That level was 3% below 1983, and 14% below 1982. The index began 1984 at 113, and after some fluctuation, hit 114 in July as hog and cattle prices both made a recovery. In August, livestock prices began to fall, forcing the index to a low of 104 in October. Rising prices at the year's end allowed the index to recover slightly to 107 in November and 108 in December.

1/ Annual average is for December previous year through November current year.

# PRICES PAID

Prices paid by farmers for major production items are collected from dealers and merchants at regularly recurring intervals by means of telephone and personal interviews. This information provides a historical series of prices paid for important production goods and services but perhaps more importantly provides cost data used in calculating the index of prices paid by farmers at the U.S. level. Also included in the index of prices paid are interest, taxes and wage rates. The index of prices received for all farm products sold, when divided by the index of prices paid gives a measure of what farm products will buy in terms of production needs such as fertilizer and machinery, and family living items.

The table below shows average prices paid by Illinois farmers for selected feeds and motor supplies in 1982 thru 1984. Beginning in January 1977, the Bureau of Labor Statistics Consumer Price Index (CPI) was used to measure farmers' costs for family living items. Therefore, data on family living costs are no longer collected by the Department of Agriculture.

State or regional prices paid for feed, seed, fuels, and fertilizer, and U.S. prices for all commodities are published currently in AGRICULTURAL PRICES, a monthly report of the Statistical Reporting Service of the U.S. Department of Agriculture, Washington, D.C., 20250. Regional prices for building materials, farm machinery, farm supplies, pesticides, and motor supplies other than fuels are also published currently in AGRICULTURAL PRICES.

PRICES PAID: Average prices paid by Illinois farmers, December 15, 1982-84 1/

| Item and unit | 1982 | 1983 | 1984 |

# FARM PRODUCTION EXPENDITURES

Farm production expenditures totaled $28.4 billion for the Corn Belt Region in 1984, 1.0% above the $28.1 billion of 1983. In comparison, the U.S. expenditure decreased 2.3% from 1983 to $128.3 billion. The Corn Belt led the nation in expenditures by accounting for 22% of the total and over a fifth of the U.S. total for livestock & poultry, farm services, feed, interest, fertilizers & soil conditioners, fuels & energy, other machinery, seeds & plants and agricultural chemicals. Major contributors to the increase in expenditures by Corn Belt farmers were larger farm services, feed, and wages & contract labor outlays. Partially offsetting were decreases of 8% for interest and 1% for livestock & poultry purchases.

The average expenditure per farm in the Corn Belt was $56,971, some $2,089 above a year earlier. Per farm expenses for the Corn Belt were over $1,800 more than the U.S. average. The expenses per farm for farm services, interest, fertilizer, lime & soil conditioners, other farm machinery, seeds & plants and agricultural chemicals exceeded the U.S. averages. The four major groups of livestock & poultry, farm services, feed and interest accounted for nearly three-fifths of the total. Farm services was the major expense for farmers in the Corn Belt accounting for a fourth of the expenses which was one percent more than a year earlier. Feed contributed 13% while interest and livestock & poultry contributed 11% and 10%, respectively. More than one-fifth of the farms reported sales greater than $100,000 and accounted for two-thirds of the regional expenses. Over a third of the farms reported sales of $20,000 - $100,000 and they accounted for 28% of the expenses. Forty-four percent of the farms realized less than $20,000 from sales of crops and livestock and they accounted for less than one-tenth of the expenditures.

Farm production expenditures are collected from a sample of nearly 14,000 farmers and ranchers Nationwide on an annual basis. Individuals are chosen from a list of farm operators supplemented with producers living inside randomly selected geographical areas to ensure representation of all farms with at least $1,000 worth of agricultural sales. The respondents are asked to report expenditures for groups of items, i.e., seeds, plants, fertilizer, lime, soil conditioners and chemicals. These expenditures are then summarized on a National basis and by economic class of farm, by farm production region, and by economic class of farm, by region.

| Expenditures | CORN BELT REGION |  | UNITED STATES |  |
|---|---|---|---|---|
|  | Dollars (million) | Percent of total | Dollars (billion) | Percent of total |

---

1/ This fertilizer information was obtained when interviewing farm operators for Objective Yield Surveys conducted by the Statistical Reporting Service and are not official estimates of total fertilizer use. The samples are relatively small and the data are subject to sampling fluctuation. 2/ Percentages apply to acres receiving fertilizer, not to total acres harvested.

# FARM LABOR FORCE

**FARM LABOR FORCE:** Illinois, by quarters, 1976-85

---

1/ Quarterly surveys discontinued. 2/ Includes other unpaid. 3/ Estimates published by region only. Illinois figures combined with IN. and OH.

# FARM WAGE RATES

**FARM WAGE RATES:** Illinois, by quarters, July 1982 - April 1985

| Year and month | Wage rates - method of pay | | Wage rates - type of work performed | | | | |
|---|---|---|---|---|---|---|---|
| | All hired farm workers | By hour only | By cash wages only | Field workers | Livestock workers | Machine operators | Supervisors |
| | | | | Dollars | | | |
| 1982 | | | | | | | |
| July | 3.76 | 3.85 | 2/ | 3.53 | 4.17 | 2/ | 1/ |
| 1983 | | | | | | | |
| July | 3.76 | 3.48 | | 3.69 | 4.14 | | 1/ |
| 1984 | | | | | | | |
| July | 4.09 | 4.06 | | 3.89 | 3.64 | | 1/ |
| Oct | 4.36 | 4.27 | | 4.17 | 4.03 | | 7.24 |
| 1985 3/ | | | | | | | |
| April | 4.42 | 4.34 | | 4.20 | 4.26 | | 7.72 |

---

1/ Insufficient data for this category. 2/ Not surveyed starting in July 1982. 3/ Estimates published by region only.

## ORDER FORM

The following publications are available on an annual subscription basis from the Illinois Cooperative Crop Reporting Service. Subscription fees are not refundable.

Free copies of these reports are available to the News Media, Illinois farm operators and other respondents supplying information for compilation of the reports.

Paid subscriptions will be distributed by first class postage.

**HOW TO ORDER:**

Check the title of each report you wish to order, enter the subscription rate in the space provided and total cost at the bottom of the column.

| Publications | Annual Subscription Rate United States | Annual Subscription Rate Foreign | Enter Amount Enclosed for Each Publication Ordered |
|---|---|---|---|
| ☐ **ILLINOIS FARM REPORT**<br>Four page bi-weekly report issued about the 12th and 26th of the month containing data on crop acreages, production, grain stocks, livestock, fruit, vegetables, prices, farm labor and fertilizer sales. | $10.00 | $12.50 | $ ________ |
| ☐ **ILLINOIS WEATHER & CROP**<br>Weekly report on crop conditions and weather data from planting thru harvest; monthly for the rest of the year. | $12.00 | $15.00 | $ ________ |
| ☐ **ANNUAL SUMMARY - ILLINOIS AGRICULTURAL STATISTICS -**<br>A summary of all information issued during the previous year with historical data for comparison plus county data on harvested acreage and production of crops and livestock numbers. The Annual Summary package includes supplemental mailings of county estimates for corn, soybeans and wheat. | $ 5.00<br>(No charge to)<br>(Illinois residents) | $ 6.25 | $ ________ |
| ☐ **ILLINOIS TIMBER PRICES**<br>Semi-annual one sheet report on timber prices by species and region. | No Charge | | |

**TOTAL SUBSCRIPTION FEES**.............................................................$ ☐
